ADVISORY OPINION STATEMENT

ROLES OF NURSES IN THE PERFORMANCE OF ADVANCED LIFE SUPPORT AND DELIVERY OF EMERGENCY MEDICAL CARE VIA AMBULANCE SERVICES

The Kentucky Board of Nursing is authorized by Kentucky Revised Statutes (KRS) Chapter 314 to regulate nurses, nursing education and practice, promulgate regulations and to issue advisory opinions on nursing practice, in order to assure that safe and effective nursing care is provided by nurses to the citizens of the Commonwealth.

The Kentucky Board of Nursing issues advisory opinions as to what constitutes safe nursing practice. As such, an opinion is not a regulation of the Board and does not have the force and effect of law. It is issued as a guideline to licensees who wish to engage in safe nursing practice, and to facilitate the delivery of safe, effective nursing care to the public.

Opinion: Roles of Nurses in the Delivery of Emergency Medical Care Via Ambulance Services
Approved Date: 10/1991

Accountability and Responsibility of Nurses

In accordance with KRS 314.021(2), nurses are responsible and accountable for making decisions that are based upon the individuals’ educational preparation and current clinical competence in nursing, and requires licensees to practice nursing with reasonable skill and safety. Nursing practice should be consistent with the Kentucky Nursing Laws, established standards of practice, and be evidence based.

Rationale for Advisory Opinion

Numerous inquiries have been received by the Kentucky Board of Nursing regarding the appropriate utilization, role, and scope of nursing practice for registered nurses and licensed practical nurses in the delivery of emergency medical care. This includes the delivery of emergency medical services via ambulance, neonatal transport services, aeromedical emergency services, mobile intensive care units, basic and advanced life-support units as well as interhospital transport systems. After review and study of the issues, the Kentucky Board of Nursing issued the following advisory opinion.
**Background**

Emergency services are available to the citizens of the Commonwealth through an established state emergency medical system. Emergency medical services are provided by personnel working collaboratively to provide basic and advanced life-support in the emergency environment. Such personnel may include, but are not limited to, emergency medical technicians (EMT), paramedics, nurses, and physicians. “Ambulance Services” for the purpose of this statement means ground, air, and mobile intensive care units as well as basic, advanced, and interhospital transport systems.

Individuals who provide services within the emergency medical system are governed by various statutes and regulated by specific state agencies including: the Kentucky Board of Emergency Medical Services (KRS Chapter 311A--licensure of paramedics, EMTs, and ambulance providers); and the Kentucky Board of Nursing (KRS Chapter 314--licensure of registered nurses and licensed practical nurses).

Advanced life support means assessment or treatment of a person with techniques such as endotracheal intubation, cricothyrotomy, chest tube placement, umbilical arterial catheterization, telemetry, cardiac monitoring, cardiac defibrillation, the administration of drugs or intravenous fluids, and other techniques.

**Advisory Opinion**

**Licensed Practical Nursing Practice**

The Kentucky Board of Nursing recognizes the participation of licensed practical nurses in the emergency medical service system. The licensed practical nurse may assist others in the performance of advanced life support procedures and provide basic life support procedures; however, the performance of advanced life support procedures is not within the scope of licensed practical nursing practice.

Furthermore, it is the opinion of the Board that the curricula of prelicensure practical nurse education programs does not prepare the licensed practical nurse for practice in the delivery of emergency medical care via ambulance services. Therefore, a licensed practical nurse who provides care in the emergency care environment should hold certification as an EMT or paramedic and, subsequently, provide care as authorized for the EMT or paramedic.

In addition, Kentucky Administrative Regulations governing staffing of basic and advanced life support ambulance services do not include licensed practical nurses as ambulance service personnel.

**Registered Nursing Practice**

The Kentucky Board of Nursing recognizes the participation of qualified registered nurses in both the delivery of emergency medical care and in the educational preparation of emergency medical technicians and paramedics. Position statements of both the Emergency Nurses
Association (ENA)\(^1\) and the Air and Surface Transport Nurses Association (ASTNA)\(^2\) recognize the role of the registered nurse in pre-hospital/out-of-hospital care. Both position statement recognize the long and effective history registered nurses have in providing education to pre-hospital care providers throughout the United States.

The Kentucky Board of Nursing recognizes the overlap of practice among emergency medical care providers and further recognizes the collaborative role of such providers.

Registered nurses who practice in emergency medical services (or who provide emergency medical care) are practicing in a specialty area of nursing practice and, subsequently, should be regulated as any other specialty area of nursing practice. Registered nurses generally do not hold (may or may not hold) certification as emergency medical technicians or paramedics, but are otherwise qualified through educational and experiential preparation and clinical competence to practice in these arenas. Registered nurses have acquired training and skill in such areas as caring for unstable neonates, high-risk obstetrical patients, seriously ill and injured adults and children having potential life and/or limb threatening conditions. Such practice is within the scope of "registered nursing practice" as defined in KRS 314.011(6).

In accordance with the definition of "registered nursing practice," it is an appropriate role and within the scope of registered nursing practice for qualified registered nurses to initiate care under established medical control by implementing established medical guidelines setting forth the delivery of emergency medical care.

Registered nurses who perform advanced life support procedures for patients with life threatening conditions or in emergencies are responsible for having adequate preparation and experience to perform such acts as required by KRS 314.021(2). The registered nurse should have documented evidence of completion of continuing education, which provides for clinical practice and demonstration of competency in the performance of such procedures. It is the responsibility of the nurse to maintain documented evidence of educational preparation and demonstrated continuing competency in the performance of the procedures.

In the performance of advanced life support procedures for patients with life threatening conditions or for patients in emergent situations, the registered nurse should:

A. Be knowledgeable of the potential complications and adverse reactions which may result from the procedure(s);

B. Possess the knowledge and ability to recognize adverse reactions and to take appropriate nursing intervention as needed;

C. Perform the procedure(s) in accordance with the established written agency policies and procedures, which are consistent with the definition of “registered nursing practice” as stated in KRS 314.011(6); and

---

\(^1\) ENA Position Statement: Role of the Registered Nurse in Prehospital Emergency Medical Services  
https://www.ena.org/SiteCollectionDocuments/Position%20Statements/Archived/Prehospital_EMS_-_ENA_PS.pdf

\(^2\) ASTNA Position Statement: Role of the Registered Nurse in the Out of Hospital Environment  
D. Act in accordance with the scopes and standards of practice promulgated by the national nursing organization appropriate to the area of practice of the registered nurse.

While performing advanced life support procedures, the registered nurse is not authorized to engage in advanced practice registered nursing practice as defined in KRS 314.011(8).

The Kentucky Board of Nursing has endorsed the ENA and ASTNA positions describing the role of the registered nurse to deliver care by initiating the nursing process, which include the following:

- Utilization of independent judgment, analytical thinking, decision making and prioritization.
- Conducting a physical assessment appropriate to the situation including pertinent history of present illness and injury;
- Formulating nursing diagnosis, expected outcomes and plan of care, which reflects synthesis, and application of knowledge, assessment data, and available resources;
- Implementing interventions based upon the nursing diagnoses and patient priorities commensurate with national standards for practice, emergency/flight nursing, and established standards of medical control;
- Evaluating the efficacy and outcome of nursing and medical interventions throughout the treatment and transfer process with continued reassessment of the patient plan of care based on patient responses and medical direction;
- Collaborating and coordinating with other personnel in the to facilitate optimum patient care;
- Communicating relevant data via telehealth technologies\(^3\) to the designated facility; and
- Delivering accurate and thorough report(s), both written and verbal, of patient information to the receiving health care team upon delivery of the patient.

**Qualifications of Registered Nurses Who Provide Emergency Care via Ambulance**

The practice of nursing in an emergency medical service setting represents a specialty area of nursing practice requiring the application of: 1) knowledge and skills as taught in prelicensure registered nurse educational programs; and 2) specialized knowledge and skill applicable to the emergency care environment as acquired via additional educational and experiential preparation, typically acquired by continuing education and competency validation.

\(^3\) “Telehealth” is defined in KRS 314.155 as the use of interactive audio, video, or other electronic media to deliver health care. It includes the use of electronic media for diagnosis, consultation, treatment, transfer of health or medical data, and continuing education.
The curricula taught in approved prelicensure registered nurse educational programs provide a substantial knowledge base for the registered nurse to provide direct patient care outside the traditional health care institution. Before assuming a nursing role in the emergency care environment, the registered nurse must have acquired appropriate knowledge and demonstrated skill proficiency unique to the delivery of care. The additional knowledge and skill may be acquired through substantial clinical practice in emergency, critical care and/or applicable specialty arenas and continuing education.

The type of facility and patient population for which the nurse has had experience will dictate the actual experience gained and; therefore, it is difficult to set a standard which is appropriate to all registered nurses, as to the length of time that a nurse must have been employed/gained experience prior to employment with an emergency medical service.

Registered nurses may acquire additional knowledge and skill in the delivery of emergency care beyond that acquired in prelicensure programs through completion of specialized courses as continuing education. Further, registered nurses should have successfully completed and maintained competence in Advanced Cardiac Life Support (American Heart Association).

In addition, nurses should complete an orientation program to the emergency medical system/service prior to serving in a primary attendant role in an ambulance. This should include, but is not limited to, applicable EMS laws and regulations, components essential to role, such as communication and transport systems, scene management, extrication techniques, crisis intervention, initiation of guidelines for care, collaborative practice with other members of the emergency health care team, and advanced trauma life-and-limb support procedures.

Nurses should maintain documentation of educational preparation and demonstrated skill proficiency in the delivery of care.

Registered nurses employed in an emergency medical service (EMS) system would be expected to implement guidelines of the medical director as established by the emergency medical services system. Nurses would be expected to perform acts according to appropriately established approved policies, procedures, and medical directives of the employing emergency medical service.

When a registered nurse is employed by an EMS service under the clinical direction of a medical director and the medical director’s responsibilities include assuring clinical competency of staff, then the registered nurse would provide evidence of educational and experiential preparation and current clinical competency as required.

A registered nurse who has obtained the appropriate knowledge and skill unique to the delivery of emergency care would not be required to be certified as an emergency medical technician or paramedic. However, a nurse would not be precluded from achieving certification as an EMT or paramedic should the individual choose this option.

A nurse who holds certification as an EMT or paramedic is not limited to the performance of acts as an EMT or paramedic. A registered nurse who is certified as an EMT or paramedic is held accountable and responsible for actions as a nurse.
Summary

The Kentucky Board of Nursing advises that registered nurses who provide emergency medical care should:

(1) Possess:
   a) In-depth, specialized knowledge and competent technical skill in the performance of basic and advanced life-support procedures, and in the implementation of medical guidelines/protocol for emergency medical services;
   b) Appropriate knowledge and technical skill to provide care to seriously ill and injured adults and children with potential life and/or limb threatening conditions; and
   c) Appropriate knowledge and skill including, but not limited to, extrication techniques, patient stabilization and scene control.

(2) Possess knowledge of the role and skills of emergency medical technicians, paramedics, and other personnel who provide services in the emergency care environment.

(3) Perform acts, which are in accordance with:
   a) Established written agency/ambulance provider policy and procedure;
   b) The definition of registered nursing practice as stated in KRS 314.011(6);
   c) KRS 314.021(2) which holds all nurses individually responsible and accountable for the individual's acts based upon the nurse's education and experience; and
   d) Statutes and administrative regulation pertaining to the emergency medical services delivery system.

(4) Maintain documentation of educational preparation and demonstrated competence in the performance of care.

When a registered nurse is employed by an EMS service under the clinical direction of a medical director and the medical director's responsibilities include assuring clinical competency of staff, then the registered nurse would provide evidence of educational and experiential preparation and current clinical competency as required.

Advanced Registered Nursing Practice

The advanced practice registered nurse may independently initiate advanced life support procedures.

Determining Scope of Practice

KRS 314.021(2) holds all nurses individually responsible and accountable for the individual's acts based upon the nurse's education and experience. Each nurse must exercise professional and prudent judgment in determining whether the performance of a given act is within the scope of practice for which the nurse is both licensed and clinically competent to perform. In addition to this advisory opinion statement, the Kentucky Board of Nursing issued Advisory Opinion Statement #41 RN/LPN Scope of Practice Determination Guidelines which contains the KBN Decision-Making Model for Determining Scope of Practice for RNs/LPNs, and published the APRN Scope of Practice Decision Making Model providing guidance to nurses in determining whether a selected act is within an individual nurse's scope of practice now or in the future. Copies of Advisory Opinion Statement #41 RN/LPN Scope of Practice Determination Guidelines and the APRN Scope of Practice Decision Making Model guidelines may be downloaded from the Board's website http://kbn.ky.gov.
Applicable Statutes From the *Kentucky Nursing Laws*

KRS 314.021(2) states that:

All individuals licensed or privileged under provisions of this chapter shall be responsible and accountable for making decisions that are based upon the individuals' educational preparation and experience in nursing and shall practice nursing with reasonable skill and safety.

KRS 314.011(6) defines "registered nursing practice" as:

...the performance of acts requiring substantial specialized knowledge, judgment, and nursing skill based upon the principles of psychological, biological, physical, and social sciences in the application of the nursing process in:

a) The care, counsel, and health teaching of the ill, injured or infirm.

b) The maintenance of health or prevention of illness of others.

c) The administration of medication and treatment as prescribed by a physician, physician assistant, dentist, or advanced practice registered nurse and as further authorized or limited by the board, and which are consistent either with American Nurses' Association Scope and Standards of Practice or with standards of practice established by nationally accepted organizations of registered nurses.

Components of medication administration include, but are not limited to:

1. Preparing and giving medication in the prescribed dosage, route, and frequency, including dispensing medications only as defined in subsection (17)(b) of this section;
2. Observing, recording, and reporting desired effects, untoward reactions, and side effects of drug therapy;
3. Intervening when emergency care is required as a result of drug therapy;
4. Recognizing accepted prescribing limits and reporting deviations to the prescribing individual;
5. Recognizing drug incompatibilities and reporting interactions or potential interactions to the prescribing individual; and
6. Instructing an individual regarding medications.

d) The supervision, teaching of, and delegation to other personnel in the performance of activities relating to nursing care; and

e) The performance of other nursing acts which are authorized or limited by the board, and which are consistent either with American Nurses' Association Standards of Practice or with Standards of Practice established by nationally accepted organizations of registered nurses.

KRS 314.011(10) defines "licensed practical nursing practice" as:

...the performance of acts requiring knowledge and skill such as are taught or acquired in approved schools for practical nursing in:

a) The observing and caring for the ill, injured, or infirm under the direction of a registered nurse, advanced practice registered nurse, physician assistant, licensed physician, or dentist;

b) The giving of counsel and applying procedures to safeguard life and health, as defined and authorized by the board;

c) The administration of medication or treatment as authorized by a physician, physician assistant, dentist, or advanced practice registered nurse and as further authorized or limited by the board which is

---

4A copy of the *Kentucky Nursing Laws* and Kentucky Administrative Regulations may be obtained at the KBN website, [http://www.kbn.ky.gov](http://www.kbn.ky.gov).
consistent with the National Federation of Licensed Practical Nurses or with Standards of Practice established by nationally accepted organizations of licensed practical nurses;

d) Teaching, supervising, and delegating except as limited by the board; and

e) The performance of other nursing acts which are authorized or limited by the board and which are consistent with the National Federation of Licensed Practical Nurses' Standards of Practice or with Standards of Practice established by nationally accepted organizations of licensed practical nurses.

KRS 314.091(1) states:

The board shall have power to reprimand, deny, limit, revoke, probate, or suspend any license or credential to practice nursing issued by the board or applied for in accordance with this chapter, or to otherwise discipline a licensee, credential holder, privilege holder, or applicant, or to deny admission to the licensure examination, or to require evidence of evaluation and therapy upon proof that the person: ...(d) Has negligently or willfully acted in a manner inconsistent with the practice of nursing; (e) Is unfit or incompetent to practice nursing by reason of negligence or other causes, including but not limited to, being unable to practice nursing with reasonable skill or safety.

The Kentucky Board of Nursing issues advisory opinions as to what constitutes safe nursing practice. As such, an opinion is not a regulation of the Board and does not have the force and effect of law. It is issued as a guideline to licensees who wish to engage in safe nursing practice.
